415 Mortars and pestles, as well as spoons of wood, are made (see Photo. 18).

[287] Painting and bark working are unknown.

171 281 The preparation of hides is the same as that practiced by the Hottentot, Herero, Bergdamara, and Betschuana. Hence, I shall dispense with a description of the process.

281 386 The women's cosmetic described above is used to dye clothing made of hides. The dye is rubbed on with the ball of the hand and is comparatively waterproof.

To be sure, it is questionable whether this process may be called "dyeing." The hides are already red from the tanning process, and the cosmetic scarcely changes the color. Perhaps it is better regarded as impregnation or greasing.

386 438 /153/ The colored stones that are pulverized and mixed with fat to make the cosmetic are dug up near Kaitsaub (45 kilometers south of Gobabis) by the Hai//um Bushmen residing there, and they constitute an article of trade. [Fig. 12 appears here.]

283 The beautiful and durable cordage of the Auin is made of the fiber of a wild agave. It looks so neat and clean that one might suspect its origin to have been in a European rope factory rather than in a Bushman settlement.

The cords are made in various strengths and are used for all kinds of purposes, mainly for the game snares.

Their manufacture is very simple and proceeds very rapidly. The leaf is softened by tapping with a wooden stick, and it is then placed on a firm base. One hand holds a pointed stick or a blunt knife firmly on the leaf, while the other hand draws the leaf against the vertically held knife and toward the body. After this has been repeated several times, the strong fibers remain and are then rolled together into cords of the thickness and length desired.

Industrial use of Bushman cordage does not seem impossible to me.

412 As a drill, the lance point or an iron knife is used, frequently red-hot.

●325 Only pieces of iron found accidentally are worked. The extraction of iron from ore is unknown.

Charcoal made from the giraffe acacia is the preferred fuel [372] for ironworking.

[Text continues on page 43]

/153 cont./

325 [237] A jackal tail fastened to a stick is used to fan the fire. A hollow reed serves as a bellows, through which one blows with his mouth to fan the fire. Whether this actually suffices to bring the iron to a red heat, however, I am unable to say.

412 Two rocks take the place of hammer and anvil. Should iron tools, such as an ax or the like, happen to be available to the Auin, these are naturally preferred.

Two pieces of green wood roughly fastened together like pincers serve as tongs.

326 The smiths (only a few, usually older people know this trade) are respected, as is shown by the fact that they are "provided with food everywhere," which is apparently the way the Auin customarily express their special esteem. [Fig. 13 appears here.]

/154/ P. Political Conditions

721 The Auin, like all Bushmen, is very warlike. Every man and youth is a warrior and capable in the use of weapons.

[714] There is no declaration of war, but if a Bushman is wearing his cap of aardwolf hide, he is on the warpath (see Photo. 21).

Special training in the handling of weapons is unnecessary, since daily life forces the Auin to use his weapons constantly in hunting.

726 I myself have not witnessed any of their wars. A reliable Kaffir described an Auin campaign, in which he participated, as follows:

Several friendly settlements decided to join in an attack on another Auin settlement. They put on their war caps and after sundown marched off in the direction of the enemy. They halted in the vicinity of the enemy settlement and, without lighting a fire (this was during the cold season!), waited for morning. After sunrise, when it had become a little warmer, they surrounded the settlement and attacked it from all sides.

My informant related that the Auin had attacked with great determination and had primarily used the lance.

The attack was made with loud shrieks and cries; no special war cry was recognized.

[36 cont.]

291 wear the short hide pelerine with which they cover themselves when sleeping. In thorny terrain they frequently wear sandals made of eland leather, as well as leather leggings. Whereas the woman always go around bareheaded, the men frequently have some sort of head covering, sometimes round hide caps and sometimes pointed little hide hats and homemade straw hats. On the 293 upper arm they wear a tight fitting leather ring, to which is attached a small bag with the most important utensils, that is, tinder, pipe, tobacco, some money, and last but not least, within the police zone, the pass.

177 They do not want European blankets. They catch fire 291 too easily, become saturated with water during the rainy season, are more difficult to carry, and are a breeding place for lice. On the other hand, cotton cloth and shirts are very popular. My re- [123] search with a horde always ended with all the informants having [124] been supplied with ready-made clothing. On the first day, the informant receives a shirt, on the second, a colorful loincloth, then a head cloth, tinder, tobacco, some white money, and then he becomes ill and disappears, and another or others come to be supplied. [37] [Figs. 4-8 appear here.] [38] The possession of old pieces of uniforms is regarded as a sign of higher position. On the farms the women dress in Herero fashion as soon as they can: they wear the high turban and regard it as extremely unseemly to take it off. There is considerable demand for European shoes. The Bushmen fear nothing as much as injury to the soles of the feet by the long thorns. Like all peoples who now live in [412] the stage of a wood or bone culture, the Bushmen, too, possess ● [325] the three most important iron tools: the short ax, obtained in [439] trade from the Blacks; an awl; and a pocketknife. Very small children run about naked; later they are given a little apron that, [531] in the case of the girls, is often attractively adorned with bead em- broidery. Extraordinary stress is put on ornamentation. Ostrich 301 egg beads hold first place in this respect. Individual !Kung are [321] masters at manufacturing them and achieve a certain affluence [556] by trading them. This work is done by the men. The beads are [462] strung in long chains on tendons or bast cords and are worn around [306] the neck. [Fig. 9 appears here.] Small chains consisting of [302] three or four links are tied to individual tufts of forehead hair to LENGTHEN THEM.

411 into the reed shaft while the other is poisoned. In other cases, the short arrowhead is joined to a bone spindle by means of a connecting piece made of grass, and this bone spindle is in turn fixed into the shaft so that the arrow is tripartite. The arrows are either carried in the quiver already assembled, or the points [78] are kept in small containers of bark or horn closed off at both ends by leather caps. Three bows of the Nogau had lengths [411] of 89, 95, and 100 centimeters. Animal tendons are used.

[714] The battle insigne of the ≠Auin is a war cap made from the hide of the aardwolf. The bow of the Naron is made of Grevia
411 wood and is about a meter long. Not only tendons but also plant fibers are used for the bowstring. The plant strings are a surrogate that the Bushmen are forced to use today due to the lack of game. The bow itself is reinforced at the ends with a binding of tendons or leather.

The arrow shafts resemble those of the ≠Auin, as do the points. The iron points are not removable and are called male. The metal is obtained from the north and is worked cold by the
● [325] ≠Auin. The Naron themselves make no iron arrowheads. [Fig. 28 appears here.]

Whereas during Kaufmann's time the ≠Auin did not have the kirri, the Naron have it today; its lower end is sharpened to a point so that it can also be used as a digging stick. The Nogau, though not too commonly, have throwing clubs that [411] correspond to those of the Dama and Herero, but are more crudely worked.

Concerning the Naron, Bleek also mentions harpoons with long, composite shafts, which serve to get jumping hares and the like out of their holes. This tool will be described in greater detail under the Dama [untranslated].

372 Like all Bushmen, the Nogau make fire by rubbing two sticks together. The female stick is called Dane-di, the male Dane-≠goa. Firemaking itself is designated as Dalisi, one of the many strange words without clicks that we find among the Nogau.

312 Bushman wells are likewise used and are called //a-si.

The girls have a toy (gai-dum) consisting of several sticks of various kinds, which they wear on the chest. They drum on
524 IT WITH THE FINGERS.

The Desert 9

The Bushmen are one of the most primitive peoples living on earth. Although most of their groups own some metal objects, Bushmen do not smelt or forge metal, but get it in trade from their Bantu neighbors. They use soft metal in the making of a few tools such as knives, arrowheads, and little axes, cold-hammering the metal into shape themselves. Bushmen make the other tools they use from wood and bone, grass and fiber, the things of the veld. They dig roots and pick berries to eat because they have no crops. The desert is too dry for anything but desert plants to grow naturally, and Bushmen, who quickly consume all the wild food available in one place, cannot stay anywhere long enough to tend crops or wait for them to grow.

There is not enough water to water livestock, and for this reason Bushmen have no domestic animals. Most of their groups do not even have dogs. Instead of herding, Bushmen hunt wild antelope with tiny arrows, sometimes made of soft, traded metal, sometimes made of bone, and poisoned with a terrible poison extracted from a certain grub, a poison which affects the nervous system of a creature and which is so deadly that an antelope shot early in the morning with a single arrow well placed in the body dies within the day. Hunting is very difficult, for travel in the veld is thirsty and rigorous and the antelope are clever, but as often as not the Bushmen hunters shoot one and then they use it all. Most of the meat is dried to preserve it, causing it to last at least a few weeks, but sooner or later every last bite of it is eaten, even the mucous lining of the nostrils and the gristle inside the ears. They sometimes eat the hide, sometimes work it into leather to use for clothing, and if the antelope bones are not all cracked for the marrow, pieces are worked into arrow points to shoot another antelope.

In order to live as they do, Bushmen must travel through

174
439 The interior !Kung have had trading relations with Bantu
[411] peoples on their periphery for over eighty years. The evidence
[415] for this is the presence of iron-tipped weapons, pottery and
[276] tobacco. The present-day !Kung have no knowledge of iron-working or pottery-making and they do not raise tobacco. The old people state that their grandfathers had these things
[173] before the first non-Bushmen came to the interior. Men in
[411] their 60's and 70's today can remember their grandfathers telling them that they began hunting with bone arrows and did not obtain iron for arrows until they were well into adult
[411] life. The making of bone arrow heads is still common know-
[321] ledge today but, as there is an abundant supply of iron fencing
[325] wire, none of the men hunt with bone. The art of chipping
[178] flint is not known in the Dobe area. It is probable that
[324] these Bantu goods (and also some European goods such as beads and buttons) reached the interior through Bushman trading intermediaries some years before the arrival of the first Bantu and Europeans.

173 Early contacts, 1879-1925 - There is disagreement among the !Kung about whether the Europeans or the Bantu were the first to penetrate the interior. Apparently the first pene-
175 trations occurred during the period 1875-1890. Hendrik Van
648 Zyl, a professional hunter, is the first European known to have reached the interior (Silberbauer 1965:114-115). In the
